TMaaS Journal 3: update on Ghent's project

See on UIA
website

In the 3rd journal of the TMaaS project, the new UIA expert Evangelos Mitsakis dives into recent developments and major achievements of the project.

He explores the functional capabilities of LINK.Gent, the main result of the TMaaS project, highlighting both the “big picture”, as well as the attention to details of the TMaaS project partners, aiming to provide a truly innovative platform for travelers and traffic managers. He also updates interested readers about the TMaaS Replicator Program and the developments that are taking place in the participating cities, as well as about the project’s outreach activities. Finally, he assesses the overall TMaaS project performance against the seven Key Implementation Challenges, showing a very good progress of the project against all mentioned challenges.
