PROJECT

COMMUTE -  
Collaborative Mobility  
Management for Urban  
Traffic and Emissions  
reduction (Closed)

📍 Toulouse Metropole,  
France

TOPIC

Urban mobility

EDIT 14 DECEMBER 2018  
BY VANESSA HOLVE,  
UIA EXPERT

## COMMUTE UIA Expert Journal – collaborative management to tackle the city's congestion

See on UIA  
website

UIA Expert, Vanessa Holve, gives a first look on how the project is being implemented

It's been a year since the COMMUTE project started its implementation and many activities have been carried out. The project has begun to produce knowledge stemming from the implementation of its innovative solution. You can now read the first of a series of journals following the COMMUTE project's implementation process. In this first edition, find out about the EU, national and local policy. The main elements explored are:

- How to make the collaborative governance model work
- How to effectively change mobility behaviours and reduce congestion
- How to effectively measure and evaluate congestion and emissions reduction

It includes information on progress made to date and how the project is overcoming challenges of implementation.

Get to know better what Toulouse Metropole is doing on the topic of urban mobility in this UIA Expert journal!
